

Communicable Disease Prevention Policy

Policy: Early Services will now replace the Covid-19 plan with a **communicable disease plan**.

“A communicable disease is an illness caused by an infectious agent or its toxic product that can be transmitted in a workplace from one person to another. Some examples of a communicable disease are; COVID-19, norovirus, and seasonal influenza” (please see other potential communicable diseases listed at the end of this document)

If you are unwell and exhibiting symptoms of a communicable disease, please refrain from entering the work place.

Procedure:

Arriving at any PGNFC work site;

Upon arriving at the work site **ALL STAFF and CHILDREN ARE REQUIRED TO WASH THEIR HANDS IMMEDIATELY**

Families are asked to self-assess prior to arriving at programs with their children. If families are exhibiting symptoms they will be asked to refrain from attending program.

All staff are asked to self- assess prior to entering the building. There is a self-assessment tool available as an app for your phone. **Please note staff are no longer required to document their assessment**, it is the individual’s responsibility to assess their health, prior to entering a work space. If unwell, please refrain from coming to work.

Social distancing between staff is strongly suggested whenever possible, to limit the spread of potentially communicable diseases. The recommended distance is about 2 meters. This is a work safe BC requirement.

As our practice is attachment based caregiving in our programs, physical distancing with the children is difficult and hard to enforce. As staff you can ensure you are the proper social distance from other adults in the room. This will naturally encourage children to spread out as their caregivers will be in various parts of the room, not congregated together. Setting up various individual work stations for the children spread out around the classrooms, may encourage the children to work independently from others. It is not likely that the children will be able to effectively social distance. We can encourage children to wash their hands often and

frequently. We can teach children to cough into their elbows. We can be creative in finding games and ways to make coughing into your “cough pocket” and washing your hands fun.

Illness in the childcare setting

If a child becomes ill in the childcare setting, they are to immediately be removed from the classroom setting. A staff member is to take the child to a designated respite area. Please indicate below which room is designated for your program. One staff will stay with the child and encourage the child to lay down on their rest mat. A different staff will contact the parents for immediate pick up. If the parents cannot be reached, the caregiver will go down the list of emergency contacts. Once the child has been picked up the caregiver is to sanitize the room and wash the bedding of the child who was ill. Please ensure the caregiver washes their hands after the child has left, before moving on to caring for additional children.

Program: **Power of Friendship Aboriginal Head Start Program**

Isolation area will be: **Resource Room**

It is important to note that our regular health policy is always in effect. If a child goes home due to vomiting or upset stomach, diarrhea they only need to be symptom free for 48 hours before returning to care.

If a child is showing signs of teething such as drooling, chronically putting things in their mouth to chew on, has teeth breaking through, this is not to be considered covid symptoms and the child will not be asked to remain at home; unless they are unable to participate in our daily routine due to pain that requires over the counter pain medication to control it.

Workers who become ill at work

If you fall ill at work with signs of influenza, the common cold, Covid-19 symptoms or any other infectious respiratory disease you must follow the earlier outlined protocol and leave the work

place. You are directed to call Northern Health virtual clinic for assessment and testing 1-844-645-7811 and advised to follow their direction given my medical professionals.

Please contact Tammy or Kim if your coordinator is not on site to inform them of the situation.

If you are the only ECE onsite and fall ill, in an emergency situation an ECEA can bump up to ECE status.

37(1) in the section, “absent employee” means an employee described in column 1 who is

- (a) Absent because of illness, emergency, vacation or other temporary leave, and
- (b) Expected to return to regular duties

An assistant can replace an educator, assistant or responsible adult for no more than 30 consecutive days ¹

The following is the hand hygiene and respiratory etiquette as outlined in the Work Safe BC returning to safe operation/ child

- Establish [hand washing](#), [hygiene and respiratory protocols](#) for everyone in the workplace.
- Set up hand hygiene stations at the entrance to the workplace. Provide alcohol-based hand sanitizer stations where a sink is not available. Ensure there is an adequate supply of hand washing supplies and alcohol-based hand sanitizer.
- Require workers, children, and others to wash their hands or use alcohol-based hand sanitizer immediately upon entering the facility. Keep hand sanitizer out of the reach of children and supervise its use.
- Require workers to wash their hands regularly throughout the day, including:
 - When they arrive at the workplace and before they go home
 - Before and after handling food (raw, cooked or pre-packaged), preparing bottles or feeding children
 - Before and after giving or applying medication or ointment to a child or self
 - After changing diapers
 - After assisting a child to use the toilet

¹ Community Care and Assisted Living Act CHILD CARE LICENSING REGULATION
www.bclaws.ca/civix/document/id/complete.statreg/332_2007

- After using the toilet
- After contact with body fluids (e.g., runny noses, spit, vomit, blood)
- Before donning and after doffing personal protective equipment
- After cleaning tasks
- After handling garbage
- Whenever hands are visibly dirty
- Support children to wash their hands regularly throughout the day, including:
 - When they arrive at the workplace and before they go home
 - Before and after eating and drinking
 - After a diaper change
 - After using the toilet
 - After playing outside
 - After handling pets and animals
 - After sneezing or coughing
 - Whenever hands are visibly dirty
- Provide education and direction to workers and children to:
 - Cough or sneeze into their elbow sleeve or a tissue.
 - Throw away used tissues and immediately perform hand hygiene.
 - Not touch their eyes, nose or mouth with unwashed hands.

Physical Distancing as outlined in the same document;

- Workers should maintain a distance of at least 2 metres from each other. Where this is not possible, for example when transferring a very young child from one worker to another, plan and communicate the work task in advance to ensure that time spent in close proximity is minimized.
- Arrange common areas in a way that allows at least two metres of physical distance between each worker. For small areas or rooms, such as a small laundry room, implement schedules and/or procedures for single-worker or limited-worker access to maintain physical distance.
- Stagger worker break times.
- Consider incorporating activities involving books, individual games, video, and online games to encourage physical distancing between children. ***As per our screen time policies we will not be introducing videos or online games. We will do our best to set up multiple work stations to encourage children to move about the room. Sand and water play is fine. We will not be encouraging the use of playdough.***

- Consider placement of children when using multi-seat strollers, for example keeping children within their smaller groupings where present, and placing children with an empty seat beside them and diagonally between rows.
- It is not always possible for workers to maintain physical distance from children, and between children, when in care. Adhere to the principle of physical distancing where possible, by:
 - Minimizing the frequency of direct physical contact with children.
 - Forming a number of separate play areas in order to space children apart. Note that children who live in the same home do not need to maintain physical distance from each other.
 - Creating smaller groups or cohorts of children and keeping these groups separate from each other.
 - Minimizing the number of different workers that interact with the same child or group of children organizing snack/meal areas to space children apart.
 - Organizing nap areas to space children apart and placing children head-to-toe or toe-to-toe.

Use of Personal Protective equipment (PPE)

Use of Masks

- If a staff member is **fully vaccinated** (fully vaccinated is considered 2 weeks posts second dose) you are not required to wear a mask in your work space or in the PGNFC common areas (front reception, hallways, elevator etc.) it is your personal choice to be masked or unmasked.
- **If you are not fully vaccinated, you must continue to wear a mask in your work space and common areas of the PGNFC**
- Clients are welcome to choose if they would like to wear masks.
- **Continue to practice universal precautions, gloves for bodily fluids, food preparation, serving food, and diapering.**
- Where PPE has been identified for tasks prior to the COVID-19 pandemic, continue to use this PPE when performing these tasks.
- Wear disposable gloves when cleaning body fluids (e.g., runny nose, vomit, stool, urine) and when diapering.
- Determine what PPE may be required for workers who are responsible for cleaning and disinfection. Read product labels and Safety Data Sheets to help make this determination.

Every centre should have an MSDS binder, easily accessible to all staff

Meals and Snacks

- Do not allow sharing of food or drink by workers or children.
- Do not use self-serve and family-style meal service. Provide snacks and meals directly to children in individual servings.
- Do not allow children to participate in food preparation.
- Establish a procedure for receiving and handling parent and caregiver provided food items and containers (e.g., lunch boxes). Consider designating a tabletop/countertop receiving area and ensure this area is sanitized. Food provided by parents and caregivers should be stored with the child's belongings or, if refrigeration is required, it should be kept in an area designated for the child's grouping or cohort, where applicable.
- Reusable dishware, glasses, and utensils must be cleaned and sanitized after each use.

Cleaning and disinfecting

- Identify all common areas (e.g., washrooms) and frequently-touched surfaces (e.g., door knobs, cupboard handles, light switches, faucet handles, tables, chairs, toys). Develop and implement a cleaning and disinfection schedule and procedures in accordance with the BC CDC's [Cleaning and Disinfectants for Public Settings](#) document.
 - **General cleaning** and disinfecting of the workplace should occur at least **once a day**.
 - **Frequently-touched surfaces** should be cleaned and disinfected at least **twice a day**.
- Toys and objects that children have placed in their mouths should be set aside, for example in a "to be washed" bin, until they are cleaned and disinfected. Toy, objects, and surfaces known to have been in contact with bodily fluids should be cleaned as soon as possible and between uses by different children.
- Clean and disinfect cots and cribs once per week, and launder crib linens between children.
- Clean and disinfect diapering stations after each use.
- When holding young children, for example when feeding or rocking to sleep, use a blanket or cloth to cover clothing. Change blankets or cloths between children.
- Wash blankets, face cloths, towels, and bibs between uses by different children.
- Empty garbage containers daily at a minimum.
- If a worker or child leaves the workplace due to symptoms of COVID-19, clean areas those individuals were in, including surfaces they may have touched, immediately upon their departure.
- Maintain an adequate supply of cleaning and disinfection products and materials.

Health and wellness policy applies to all staff and children within our Early Services programs

Attached is the Early Services Health and Wellness Policy. Children and staff are to adhere to the health and wellness policy. Please note the difference; Children are required to stay home for 48 hours, staff may return to work after 24 hours, if their absence is not communicable (as an adult you are the best judge of your own body and illness). For example, if you have flu / cold like symptoms and are not well, you would be expected to stay home until you are 24 hour symptom free, children would be required to stay home for 48 hours. As adult we are better able to manage our bodily fluids, hand washing etc.
